

Best-In-Class

Adapter For Power Pallet Trucks

PIAD Precision Casting Corp.

Greensburg, Pennsylvania

Metal:	Yellow Brass
Casting Process:	Permanent mold.
Weight:	12 lbs.
Dimensions:	6.5 x 7.5 in.
Application:	Affixes the control head to a power pallet truck

- The cast component replaced a 13-piece aluminum fabrication. It is produced in brass to ensure that the component maintains its strength and performs under the harsh conditions of the material handling industry. Despite using a more expensive base material, the conversion to casting still produced a 25% cost reduction.
- The casting increased the throughput and simplified procurement significantly, and the aesthetics of the component also were greatly improved.
